U.S. Patent Application Serial No. 09/669,448 Attorney Docket No.: 001241

a second conductivity type cladding layer containing Al as a group III element and formed with a ridge portion;

a current blocking layer, formed on said second conductivity type cladding layer around said ridge portion, containing Al as a group III element in this order, wherein

an angle θ of inclination on a side surface of said ridge portion with respect to an upper surface of said substrate is at least 70° and not more than 117°,

a distance t between said emission layer and said current blocking layer satisfies a relation of $t \le 0.275/(1 - (X2-X1))$ micrometer assuming that X1 represents a composition ratio of Al in group III elements forming said second conductivity type cladding layer, X2 represents a composition ratio of Al in group III elements forming said current blocking layer, and

a lower width W of said ridge portion is at least 2 μm and not more than 5 μm .

4. (Twice Amended) The semiconductor laser device according to claim 1, wherein said distance t between said emission layer and said current blocking layer satisfies a relation of t ≤ 0.252/(1 - (X2-X1)) micrometer.
